

# Protect the most important asset your business has.

Enhanced Security and Protection Solutions from Green Cloud Technologies.

According to US Census Bureau research, 93% of companies that lost their data for 10 days or more filed for bankruptcy within one year of a disaster; and 50% filed for bankruptcy immediately.

Yet, 56% of organizations in North America don't have a tested disaster recovery plan.

Most businesses would agree that data is one of their most important assets. It is almost certainly worth many times more than the physical equipment that it is stored upon. While a standard property policy may cover the physical equipment loss, it would not cover the cost to restore data was damaged or destroyed – or cost of being out of business until your servers and information systems were operating again.

## ARE YOU PROTECTING YOUR BUSINESS?

- o Do you back up your data? If so, have you tested your backup lately?
- o Do you have a cyber insurance policy that would cover costs associated with losing your data? Or does it only cover hardware?
- o If you can restore your data, how long would it take?
- o How long can you afford to be out of business?
- o Can you fully restore your servers without buying additional hardware?

### We can be your front line of defense.

Businesses can protect their data with a secure, turnkey server restoration system so critical data can be accessed and restored quickly – getting you back in business quickly. Green Cloud offers true disaster recovery services utilizing redundant data centers in a SSAE16 environment. With our solutions, your data is backed up in a tier III data center and can be restored to a full performance environment in as little as an hour. No insurance policy can give you that.

### Enhance your security and cover your assets.

Green Cloud's portfolio of solutions provide ironclad security with world-class physical and network security measures in our data centers. In addition, we have multiple cyber protection policies that provide another unique layer of protection.

Having backup is not enough to protect your business. Let us create a server recovery and business continuity plan for you. With our disaster recovery solution, we'll test your backup with a full mock restoration exercise. And we'll test it every year to ensure we can recover it quickly – when we need to – and get you back in business quickly, because that's what it's all about.

With our solutions, rest assured we'll be hard at work protecting your most important asset - all day, everyday.
